

(a) max pooling 2x2, s=2

each 2x2 window keeps its maximum:
75% discarded, no parameters

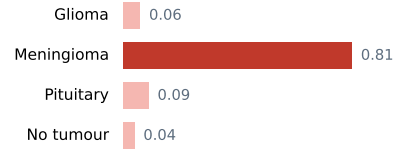

(b) flatten, dense head, softmax

flatten
8192

dense
128

$$8192 \times 128 + 128 = 1,048,704 \text{ parameters} = 81\% \text{ of the network}$$
